

**IT STARTS WITH A  
CARDBOARD BOX**

# DIY Ocean

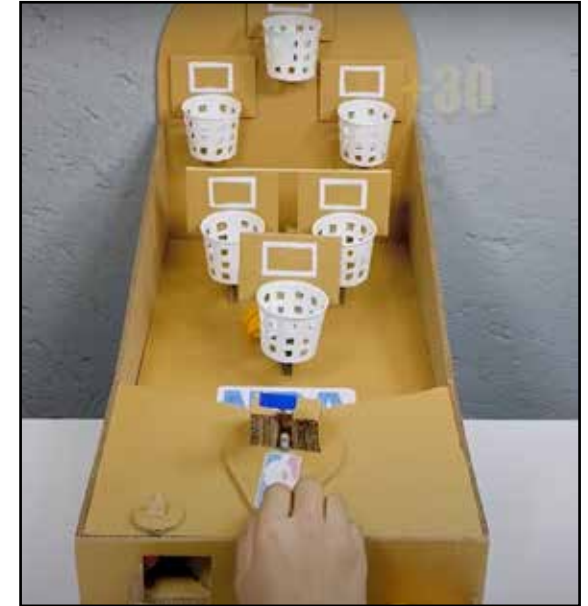

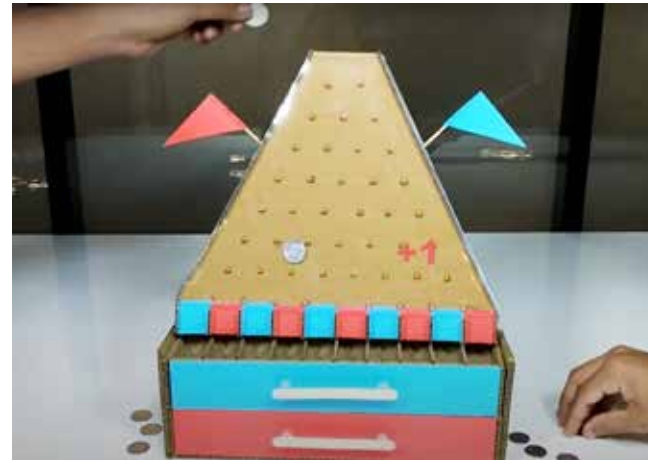

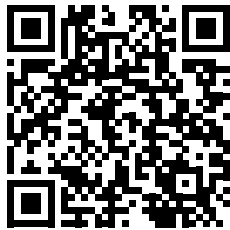

A great site to visit for all budding entertainment engineers.

What a great youtube site with loads of cardboard based projects . We illustrate some of the basic arcade type projects that can be built with ease with some cardboard, glue, elastic bands and bits that can be found around the home.

If you need assistance ask the assistance of a parent for cutting out parts and drilling holes. However, these projects are learning by doing exercises and seek assistance but don't let those adults take over your project.

Watch the videos and they provide all the instruction you need.
